

Dear Editor,

I am pleased to submit our manuscript titled "Ray-based Automatic Tuning of Four Single Quantum Dots in a GaAs/AlGaAs Quantum Dot Device" for consideration for publication in Japanese Journal of Applied Physics. In this work, we present a novel method combining minimal one-dimensional voltage sweeps with machine learning to automate the tuning of four separate single quantum dots in a GaAs quantum dot device. Our approach simplifies the tuning process and reduces the complexity of data acquisition process.

We believe that our findings are of great interest to the readership of Japanese Journal of Applied Physics, as they contribute to advancements in quantum dot devices and quantum computing technologies. We hope that this work will inspire further research in automated quantum dot tuning methods.

This manuscript is original, has not been published elsewhere, and is not under consideration by any other journal. All authors have approved the manuscript and its submission to Japanese Journal of Applied Physics.

Thank you for considering our work. We look forward to your response and are available for any questions or clarifications.

Sincerely,

Ehsan Alizadeh Kashtiban
