
V_2
$(N_1 + 1, N_2)$
P
(N_1, N_2)
V_1
1 pixel = unit of distance (incl. τ)
pixel colour: charge configuration
pixel centre: the single voltage pair the simulator evaluates
true transition line (zero width)
labelled pixel: last one before the configuration changes
$+V_2$
P
$+V_1$
P is labelled if its configuration differs from its $+V_1$ or its $+V_2$ neighbour
